

# Advanced Materials For Construction and Repair Of Concrete Course

## Venue Information

---

**Venue:** London UK

**Place:**

**Start Date:** 2026-01-20

**End Date:** 2026-01-24

## Course Details

---

**Net Fee:** £4750.00

**Duration:** 1 Week

**Category ID:** CACETC

**Course Code:** CACETC-64

## Syllabus

---

### Course Syllabus

#### Course Description

Concrete is used throughout the world for a wide range of applications. In order to improve the properties of concrete, recent advances in material science introduce new materials or admixtures to be added to or replace conventional concrete materials. Such materials could be used in new concrete construction and/or in repairing new or existing structures. These materials could cause more harm than benefit or at least be ineffective if not properly used.

This five-day course will introduce newly developed concrete materials as well as the repair materials utilized in most repair works in concrete structures either for those needed during construction or for rehabilitation of existing structures.

concrete materials, what tests should be performed and how to interpret their results, what to look for in specifications and troubleshooting of material related problems.

## **Course Objective**

**The objectives of this course are as follows:**

- Provide participants with required information about the newly developed reinforced concrete materials.
- Help them understand the different test methods for various materials and interpret their test results.
- Assist participants to effectively consult the technical specifications of these materials.
- Provide them with troubleshooting methods for material-related problems.

## **Who Should attend?**

This course is targeted for design engineers, architects, supervision engineers and inspectors from public agencies and private sector. This course is also essential for contractors, project engineers and other construction staff.

## **Course Outline**

### **Introduction and Overview**

- Conventional Concrete Materials Limitations and Problems
- High Strength Concrete and High Performance Concrete
- Special Constituent materials and Admixtures

### **Construction Practices for Concrete in the Gulf**

- Specifics of Gulf Environment
- Definition of hot weather for concreting processes
- Precautions for different concreting operations in the hot weather of Gulf region

### **Non-Traditional Types of Reinforcement Used in Concrete Structures**

- Galvanized and epoxy coated bars
- Prestressing steel
- Fiber Reinforced Plastic (FRP) reinforcement for concrete

### **High Strength Concrete: General**

- Importance and Economy
- Durability Improvement
- Structural Improvement
- Concerns

### **High Strength Concrete: Materials**

## **High Strength Concrete: Production**

- Batching and Mixing High Strength Concrete
- Placing and Compacting High Strength Concrete
- Finishing and Curing High Strength Concrete

## **High Performance Concrete**

- Definition
- Importance and Economy
- Performance Improvement
- Concerns

## **Standard Test Methods for Non-Conventional Concretes and Reinforcement**

- Standard test methods for fresh and Hardened Special concretes
- Standard specifications for epoxy coated bars
- Standard specifications for steel wires and strands for pre-stressed concrete
- Standard test methods for properties of FRP rods

## **Technical Specifications for Concrete and Reinforcement**

- Specification definition and specified qualifications
- Specification types, features and format
- Sample concrete and reinforcement specifications

## **Latex Modified Concrete: Introduction & Materials**

- Background
- Standard Specifications and Guides
- Materials

## **Latex Modified Concrete: Production**

- Mix Proportioning
- Mixing and Placing
- Finishing and Curing

## **Latex Modified Concrete: Properties and Applications**

- Properties of Fresh LMC
- Properties of Hardened LMC
- Durability of LMC
- Applications and Recent Development

## **Repair Materials for Concrete Structures**

- Required properties in repair materials
- Types of repair materials

- Dosage and Over Dosage
- Workability
- Setting and Finishing
- Long Term Performance
- FRP versus steel reinforcement
