Advanced Materials For Construction and Repair Of Concrete Course

Venue Information

Venue: London UK

Place:

Start Date: 2026-04-28

End Date: 2026-05-02

Course Details

Net Fee: £4750.00

Duration: 1 Week

Category ID: CACETC

Course Code: CACETC-64

Syllabus

Course Syllabus

Course Description

Concrete is used throughout the world for a wide range of applications. In order to improve the properties of concrete, recent advances in material science introduce new materials or admixtures to be added to or replace conventional concrete materials. Such materials could be used in new concrete construction and/or in repairing new or existing structures. These materials could cause more harm than benefit or at least be ineffective if not properly used.

This five-day course will introduce newly developed concrete materials as well as the repair materials utilized in most repair works in concrete structures either for those needed during construction or for rehabilitation of existing structures.

concrete materials, what tests should be performed and how to interpret their results, what to look for in specifications and troubleshooting of material related problems.

Course Objective

The objectives of this course are as follows:

- Provide participants with required information about the newly developed reinforced concrete materials.
- Help them understand the different test methods for various materials and interpret their test results.
- Assist participants to effectively consult the technical specifications of these materials.
- Provide them with troubleshooting methods for material-related problems.

Who Should attend?

This course is targeted for design engineers, architects, supervision engineers and inspectors from public agencies and private sector. This course is also essential for contractors, project engineers and other construction staff.

Course Outline

Introduction and Overview

- Conventional Concrete Materials Limitations and Problems
- High Strength Concrete and High Performance Concrete
- Special Constituent materials and Admixtures

Construction Practices for Concrete in the Gulf

- Specifics of Gulf Environment
- Definition of hot weather for concreting processes
- Precautions for different concreting operations in the hot weather of Gulf region

Non-Traditional Types of Reinforcement Used in Concrete Structures

- Galvanized and epoxy coated bars
- Prestressing steel
- Fiber Reinforced Plastic (FRP) reinforcement for concrete

High Strength Concrete: General

- Importance and Economy
- Durability Improvement
- Structural Improvement
- Concerns

High Strength Concrete: Materials

High Strength Concrete: Production

- Batching and Mixing High Strength Concrete
- Placing and Compacting High Strength Concrete
- Finishing and Curing High Strength Concrete

High Performance Concrete

- Definition
- Importance and Economy
- Performance Improvement
- Concerns

Standard Test Methods for Non-Conventional Concretes and Reinforcement

- Standard test methods for fresh and Hardened Special concretes
- Standard specifications for epoxy coated bars
- Standard specifications for steel wires and strands for pre-stressed concrete
- Standard test methods for properties of FRP rods

Technical Specifications for Concrete and Reinforcement

- Specification definition and specified qualifications
- Specification types, features and format
- Sample concrete and reinforcement specifications

Latex Modified Concrete: Introduction & Materials

- Background
- Standard Specifications and Guides
- Materials

Latex Modified Concrete: Production

- Mix Proportioning
- Mixing and Placing
- Finishing and Curing

Latex Modified Concrete: Properties and Applications

- Properties of Fresh LMC
- Properties of Hardened LMC
- Durability of LMC
- Applications and Recent Development

Repair Materials for Concrete Structures

- Required properties in repair materials
- Types of repair materials

- Dosage and Over Dosage
- Workability
- Setting and Finishing
- Long Term Performance
- FRP versus steel reinforcement
