Course Syllabus

Introduction

This interactive programme has been designed to enable delegates to learn more about the latest international development and best practice in implementing and operating a structured management systems approach to manage key operating areas of businesses e.g. quality management, environmental management, occupational safety & health.

The programme uses as its core the model offered in PAS99 – specification of common management systems requirements as a framework for integration as a structure for integration. This model is fully

- Identify the common components of management systems standards
- State the benefits of an effective integrated management system
- Understand the business benefits of the integrated approach
- Develop a framework for integration in their own organisation
- Future proof their own systems in readiness for changes to ISO standards

Contents

Day One

The principles and benefits of an integrated management system approach

- Introduction
- What is a management system
- The benefits of managing using the systems approach
